Soft Corners & Accessories	67

Care and handling of Millwork

Unfinished woodwork is vulnerable! Apply finish as soon as possible following the manufacture unfinished instructions.

Never expose unfinished millwork to direct sunlight!

Always protect unfinished millwork from moist conditions. Never store on the ground, on concrete, or where rain can blow in.

All Mouldings should be stored horizontally off the floor and in a dry location

It's critical to protect millwork from direct sunlight prior to finishing to avoid rapid drying and bleaching. Even a few hours exposure to direct sunlight causes drying and bleaching. Millwork must be stored in a dry area away from excess heat. Never store on the ground, nor allow wood to come into direct contact with concrete. The natural tendency of concrete to absorb moisture can create a "wicking" of moisture out of the air or the ground and into the wood.

Mouldings must be acclimated

72 hours prior to installation, Mouldings should be unbundled and allowed to acclimate to the environment in the room in which they will be installed, with a controlled humidity level. The humidity at time of acclimation should be similar to the humidity expected upon occupancy of project.

Finishing

Light sanding is required prior to finishing. Follow manufactures recommended instructions for your product type.

FLEXIBLE MOULDING

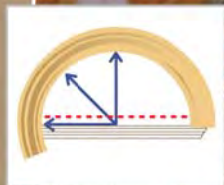

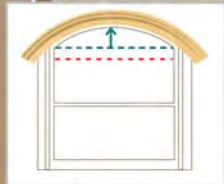

Distributed by **DREPAC**

TruFlex™ Gives You the Feel
and Beauty of Real Wood!

Matching flexible
moulding for curved
applications and
timeless beauty.

- Arches
- Bow Windows
- Ceilings
- Curved Stairwells
- Curved Walls
- Ellipticals
- Radius Corners
- Round Columns

WWW.TRUFLEXMOULDING.COM

For Custom Profile Allow 4 to 6 Weeks

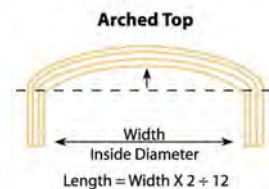

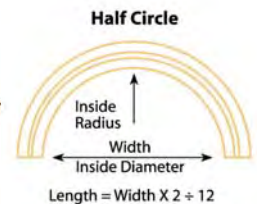

TruFlex™ flexible moulding

allows you to add trim to window arches, curved walls and other specialized applications. TruFlex™ moulding is man-made and can be bent without splintering or weakening.

This unique building product creates curves that are seamlessly integrated with other millwork.

TruFlex™ has been engineered so that it easily flexes or curves in either direction to fit around countless challenging shapes. Use TruFlex™ as your choice of flexible moulding around arched doorways, windows, or entry places and along walls that gently curve; such as a circular stairwell or tower.

OrePac is now offering

TruFlex™, the best source for quality flexible mouldings!

TruFlex™ is a long-lasting material that handles like wood without the deterioration that can be associated with real wood products.

It can be stained, painted and sealed just as you would ordinary moulding. It resists warping, wearing, splitting, or mildewing making it

ideal for indoor installation.

All moulding profiles can be reproduced in TruFlex™

flexible moulding.

GENERAL INFORMATION

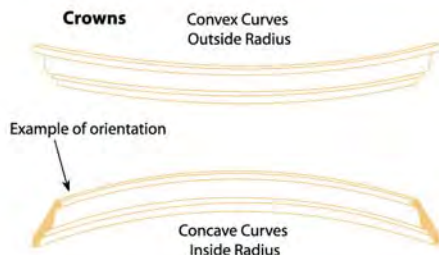

- Minimum length on special orders is 6' maximum length of flexible is 12'.
- Longer lengths may be available, upon request, for special orders.
- All profiles can be reproduced in TruFlex™ flexible moulding.
- TruFlex™ is paintable and or stainable.
- All flexible moulding is sold to the nearest whole foot only.

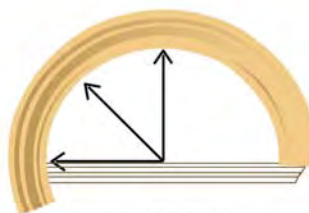

Bow Windows

TruFlex™ Manufacturing

- Visit our website for a full online catalog and dealer locator. Also check out our new online radius calculator.

Round Columns

APPLICATION:

CUTTING

Mouldings can be cut, shaped and sanded by using standard woodworking tools. Hold moulding firmly to table when cutting. Cut material long and then cut or shave to exact length. When shaping, make sure to use a few small passes instead of a single deep cut.

FASTENING

Determine material layout and placement for installation. Use industrial adhesive for bonding. Keep nails or screws to a minimum and keep them away from ends or edges to avoid bumps. The best way to fasten moulding is to lay a block of wood over the face, nail through the block then remove nail and block once the adhesive has cured.

PAINTING

Do not paint before installation. Clean material with water and a mild detergent drying thoroughly prior to painting. Fill and sand like wood, using filler that will adhere to an oil based man-made product. For best results a primer is recommended. Painting can be done with latex, enamel, waterbase or oil paints. When using alkyd enamels or oil based enamels, a water-based or latex undercoat is required. If under coat is not used paint may not dry properly.

STAINING

Never stain before installation. Clean material with water and mild detergent drying thoroughly prior to staining. Wood grain appearance can be affected if the surface is altered: we do not recommend sanding. Gel stains that are designed for synthetic surfaces work best. Use manufacture's instructions when applying stain. When filling nail holes its best to stain material first then use a filler that matches the cured stain. Apply clear coat after staining.

Name:	City:	State:	Zip:

For Custom Profile Allow 4 to 6 Weeks

General Information:

Minimum length for stainable flexible moulding is 6', maximum length is 12' and is available by special order only.

Minimum length for paintable flexible moulding is 6' maximum length is 12' for stock items. Longer lengths maybe available upon request for special orders. All flexible moulding is sold to the nearest whole foot only.

Cutting: Mouldings can be cut, shaped and sanded by using standard woodworking tools. Hold moulding firmly to table when cutting. Cut material long and then trim or shave to exact length. When shaping, make sure to use a few shallow passes instead of a single deep cut. Don't sand or shape wood grain on stainable flexible moulding.

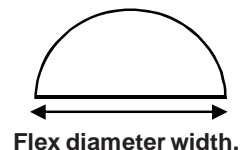

Fastening: Determine material layout and placement for installation. Use industrial adhesive for bonding. Keep nails or screws to a minimum. Keep nails and screws away from ends or edges to avoid bumps. The best way to fasten moulding is lay a block of wood over the face, nail through block and then remove nail and block once the adhesive has cured.

Painting: Clean material prior to painting. Fill and sand like wood, using filler which will adhere to an oil-based man-made product. For best results a primer is recommended. Painting can be done with Latex, Enamel, Waterbase or Oil paints. When using Alkyd enamels or Oil based enamels waterbased or latex undercoat is required, if undercoat is not used, paint may not dry properly. Do not paint before installation.

Staining: Clean material prior to staining. Wood grain appearance can be affected if the surface is altered; we do not recommend sanding. Gell stains work best that are designed for synthetic surfaces. Use manufacturer's instruction when applying stain. Never stain before installation. When filling nail holes, it's best to stain material first. Then use a filler that matches the cured stain. Apply clear coat after staining.

Ordering Instructions:**How to order-True Radius Half Circle:**

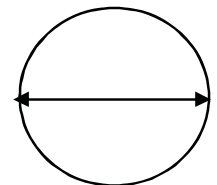

1. Determine diameter dimension (distance across inside width of circle).
2. Determine radius dimension (half of diameter dimension).
3. Multiply diameter dimension times 2 to calculate length.
4. Round length up or down to nearest even ft. Example: Diameter 24" x 2 = 48" round up to 5ft.
5. Multiply even footage length times our moulding profile price per lf to calculate price.

**How to order-True Radius Quarter Circle:**

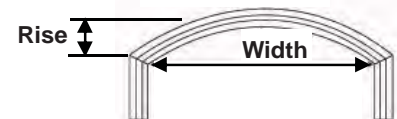

1. Determine inside width and radius of 1/4 circle portion..
2. Verify radius is same as width or height.
3. Multiply radius dimension times 2 to calculate length.
4. Round length up or down to nearest even footage. Example: radius 18" x 2 = 36" rounded up to 4 ft. (min. length)
5. Multiply even footage length times our moulding profile price per lf to calculate price.

**How to order-True Radius Full Circle:**

1. Determine diameter dimension (distance across inside width of circle).
2. Determine radius dimension (half of diameter dimension).
3. Multiply diameter dimension times 4 to calculate length.
4. Round length up or down to nearest even ft. Example: 26" x 4 = 104" rounded up to 9ft.
5. Multiply even footage length times our moulding profile price per lf to calculate price.

**How to order-Arc Eyebrow Segment Circle:**

1. Determine arc radius using inside rise and width dimension of arc segment circle.
2. Divide width dimension by 2 and multiply it times itself (squared).
3. Multiply height dimension times itself (squared).
4. Add new width sum and new height sum together.
5. Divide sum total by height dimension first multiplied times 2 to calculate radius dimension.
6. Determine material length by multiplying rise times 3 and adding sum to width.
7. Round length up or down to nearest even footage. Example radius 7"R x 3 = 21" + 60"W = 81" rounded up to 7ft.
8. Multiply even footage length times our moulding profile price per lf to calculate price.

In General: True Radius Casing Flexibility Range: 1.Diameters 1' 6" to 3' will expand 4" and contract 2" if the profile is not larger than 3/4" x 3-1/2" (larger size profiles will restrict flexibility for diameters within this range.) 2.Diameters 4' and larger will expand 10" and contract 6" if the profiles is not larger than 3/4" x 3-1/2" (larger profiles will restrict flexibility for diameters within in this range).

Pre-forming Limitations: 1.Minimum D 4' (24" Radius) if the profiles is 6" to 8" wide. 2.Minimum D 3' (18" Radius) if the profile is 5" to 6" wide. 3.Minimum D 2' 4" (14" Radius) if the profile is 3' 2" to 5" wide. 4.Minimum D 1' 6" (9" Radius) if the profile is 2" to 3' 2" wide.

Note: The thicker edge of moulding profile will be made facing out unless otherwise specified.
